

Congress is part of the problem or the solution

Together we can solve global warming, not only through energy efficiency in our own homes, but by holding our Members of Congress accountable in their House. The window of opportunity is closing, and the time for action is now. If we are to avoid a climate catastrophe, Congress must act now to promote clean and efficient sources of energy, not dirty and dangerous fossil fuels or nuclear power.

The good news is that it's not too late!

We already have all the tools we need to stop global warming. By using energy more efficiently and investing in renewable energy sources such as wind and solar, we can reduce pollution and stop warming our planet. Even better, we can create new jobs and ensure that the U.S. continues to be a technology leader well into the 21st century. The technology is ready—all we have to do is act!

- Left unchecked, global warming will cause sea levels to rise, threatening coastal communities from erosion and more intense storms.
- Longer and drier summers mean more severe and intense forest fires, putting communities and ecosystems at risk.
- Deadly heat waves will become more common as average summer temperatures increase.

...and the country is feeling the effects

The world's most respected scientists agree that global warming is happening, and that the main cause is burning fossil fuels such as coal and oil. Time is running out. According to Dr. James Hansen, NASA's top climate expert, we have less than 10 years to reduce our global warming pollution levels before it's too late. We must take action now or our planet will face major and potentially disastrous consequences.

Here's what you can do to help:

1. Call your Member of Congress at 202.224.3121. Tell them to protect our way of life and put global warming on the front burner.
2. Volunteer with Project Hot Seat. Go to www.projecthotseat.org/getinvolved to learn more.
3. TELL A FRIEND about Project Hot Seat and encourage them to get involved!

Project Hot Seat is a project of:

We're turning up the heat on Congress, to stop global warming—right now.

Don't just sit there, do something.

STOP GLOBAL WARMING

PROJECT HOT SEAT
